Personal Profile

To obtain a challenging position in enterprise application integration environment where technology integrates with business functionalities to enhance business processes. I look forward to the opportunities where I can use my analytical skills in combination with technical expertise to improve all phases of enterprise development, implementation, and maintenance. I am an astute professional with 3 Years of working experience in AWS Cloud services and DevOps tools such as GIT, Jenkins, Terraform, Docker, Ansible, Maven, Java, Kubernetes, Helm and Argo CD.

Technical Skills

- **Infrastructure as Code (IaC) & Configuration Management:** Terraform, Ansible
- **Cloud Platforms: Amazon Web Services (AWS):** EC2, VPC, IAM, S3, Route 53, CloudFront, EBS, CloudWatch, ELB and Autoscaling Group
- **DevOps Tools and Technologies:** Docker, Kubernetes, API Gateway, Lambda, Maven, GitHub, Jenkins, ELK, SonarQube, Helm, Argo CD, AWS Direct Connect
- **Monitoring & Logging:** AWS CloudWatch, Prometheus, Grafana
- **Databases and Data management:** RDS/SQL, NoSQL, Aurora SQL
- **Operating Systems & Scripting:** Linux, Shell Scripting (Bash)
- **Project & Issue Tracking:** JIRA

Experience

TATA COMMUNICATIONS TRANSFORMATION SERVICES, Chennai , India

Junior Cloud Engineer (provisioning and configuring)

23 Dec 2021 – 18 Jan 2025

- Designed and deployed a **cloud-native E-commerce application** using **microservices architecture**, supporting user registration, product catalog, cart values, payments, order management, and admin dashboards.
- Implemented **CI/CD pipelines using Jenkins**, integrated with **GitHub**, enabling automated build, test, and deployment workflows for multiple microservices.
- Containerized all application services using **Docker**, managing build workflows with **Maven (Java services)** and **Node.js (frontend/backend services)**.
- Provisioned and deployed containerized workloads to **Amazon EKS (Elastic Kubernetes Service)**, ensuring scalability, high availability, and fault tolerance.
- Managed Kubernetes deployments using **Helm charts**, enabling version-controlled, repeatable, and environment-specific releases.
- Implemented **GitOps-based continuous delivery using Argo CD**, automating Kubernetes deployments and ensuring configuration consistency across environments.
- Configured **AWS IAM roles and policies** to securely manage access between Jenkins, EKS, and AWS services following least-privilege principles.
- Monitored application health and infrastructure using **AWS CloudWatch**, troubleshooting pod failures, deployment issues, and performance bottlenecks.
- Actively monitored **Jenkins pipelines**, resolving build failures quickly to unblock releases and meet sprint deployment timelines.
- Performed **production deployments every sprint**, validating application stability and supporting end users during post-deployment issues.

- Collaborated with development teams to **review code, manage GitHub repositories**, handle branching strategies, pull requests, and release tagging.
- Supported **container lifecycle management**, including image versioning, rollback strategies, and zero-downtime deployments on Kubernetes.
- Assisted in **onboarding new engineers**, helping them understand CI/CD pipelines, Docker workflows, Kubernetes deployments, and GitOps processes.
- Participated in **on-call support**, responding to CI/CD pipeline issues, deployment failures, and production incidents to ensure platform reliability.

Vinsys IT Services Ltd, Trichy, India

AWS re/Start Instructor

06 Oct 2025 – 06 January 2026

- Completed an intensive, full-time AWS re/Start training program focused on cloud foundations, Linux fundamentals, Python scripting, and networking concepts.
- Gained hands-on experience with AWS core services including EC2, S3, IAM, VPC, RDS, CloudWatch, CloudFormation, AWS CLI, and Systems Manager (SSM).
- Performed real-time labs such as launching and securing EC2 instances, configuring VPCs, subnets, route tables, NACLs, and security groups, and managing IAM users, roles, and policies.
- Applied AAA security principles (Authentication, Authorization, Accounting) through IAM best practices, MFA enforcement, role-based access control, and access monitoring.
- Implemented CIA triad concepts (Confidentiality, Integrity, Availability) using encryption, least-privilege access, backups, and high-availability designs.
- Learned and practiced basic disaster recovery strategies, including data backups, recovery planning, and multi-AZ architecture concepts.
- Automated operational tasks using AWS Systems Manager (SSM) and deployed applications using CloudFormation templates.
- Participated in team-based capstone projects simulating production cloud environments, involving architecture design, troubleshooting, monitoring, and technical documentation.
- Developed strong skills in Linux administration, shell scripting, cloud troubleshooting, and understanding AWS networking concepts (CIDR, VPC, subnets, NACLs, security groups).

Education

Master of Science, Cloud Computing

Jan 2026 – Ongoing

National college of Ireland, Dublin

DevOps and CCNA Training

Aug 2024 - Jan 2025

Besant Technologies, India

Bachelor of Engineering in Computer

Aug 2017- July 2021

Kumaraguru College of Technology, Coimbatore, India

Skills

- | | |
|----------------------------------|---|
| • CIA Triad | • Disaster Management |
| • AAA Security Principles | • AWS Lambda |
| • Natural Language Processing | • Agile-Scrum Methodology |
| • High Availability | • AWS IAM (Users, Roles, Policies, MFA) |
| • Site-to-Site VPN | • OpenID Connect |
| • RBAC Principles | • Able to work with deadline-oriented |
| • Migration from OnPrem to Cloud | • High learning ability |

Academic Projects

- **Alexa Chatbot with Alexa Skills kit Description:**
Developed a production-grade voice assistant system that integrates Amazon Alexa with a Large Language Model (LLM). Implemented serverless architecture using AWS Lambda and API Gateway for intent handling, with Cognito for authentication. Automated deployments using Code Pipeline and Code Build, and provisioned infrastructure via Terraform. Monitored performance with CloudWatch and ensured security using IAM and KMS.
- **YouTube Trending video Analysis - Data Analytics on AWS**
Description: Implemented an end-to-end data analytics pipeline on AWS to analyze YouTube trending video data. Raw datasets were ingested into S3, transformed with AWS Glue, and queried using Athena. Real-time streaming data was processed with Kinesis and Lambda, while insights were visualized in Quick Sight dashboards. The solution automated data workflows using Step Functions and ensured secure, scalable access with IAM policies.
- **Hospital Management Appointment booking Application – Android Studio**
Description: Developed Hospital Management & Appointment Booking Application using Android Studio and Visual Studio with Firebase as the backend. The application allows patients to book appointments, view doctor availability, and manage medical records, while hospitals can track schedules and patient details. Focused on building a secure, user-friendly, and efficient system that reduces manual work and improves overall healthcare service management.

Core Competencies

- Amazon Certified Solutions Architect – Associate (AWS)
- TOEFL IBT (English Proficiency Test).
- Cisco Certified Network Associate (CCNA) at Besant Technologies
- Kubernetes for the Absolute Beginners

Core Competencies

- **Leadership & Team Collaboration:** Led DevOps documentation efforts by creating CI/CD runbooks, deployment guides, and troubleshooting documentation, mentoring interns and supporting rapid onboarding of new engineers. Improved team productivity by standardizing debugging procedures and proactively resolving pipeline and deployment blockers. Monitored application performance post-production and ensured stable operations through timely incident resolution.
- **Operational Excellence:** Improved system reliability by reducing CI/CD pipeline failures and production incidents through proactive monitoring, root cause analysis, and optimization of build and deployment workflows. Actively identified and resolved infrastructure and deployment bottlenecks to maintain high availability.
- **Automation & Continuous Improvement:** Designed and implemented automated validation and quality checks within CI/CD pipelines, and applied **parallelization techniques in Jenkins** to significantly reduce build times and optimize release cycles.
